UMLStudio provides an integrated development environment for UML modeling and code generation. It is designed to enable the efficient development of logical models, software, and hardware designs based on UML. VS-UMLStudio is compatible with all major UML modeling tools, including Visual Paradigm, SmartDraw, and GraphModel. It can provide the ability to reuse your previous models. By using code generation, you can easily implement your model into Visual Studio projects without spending time writing code. VS-UMLStudio provides numerous controls and views for developing and analyzing UML models. It

provides a set of functions that can be used to perform tasks that are relevant to the development of UML models, such as:

- Create the model
- View a model
- Edit the model
- Run a model and compare results
- See how a model evolves
- Work with and generate code based on models
- Navigate through the model

- Is a collection of ready-to-use components allowing .NET programmers to create applications with user-friendly interface, just as if they had a mouse pointer and desktop computer.
- Equipped with advanced design capabilities for mobile devices.
- Includes many useful controls to display data from SQL database.
- Supports many data types: int, long, short, byte, SByte, Boolean, DateTime, Decimal, Currency, Single, Double, Decimal, Decimal, IEnumerable, Object, and TimeSpan
- Is a very easy-to-use component for .NET programmers to quickly and effectively create app

interfaces that deliver the user-friendly experience that will allow developers to focus on other important tasks. NOTE: To get better performance, MFC, .NET, Qt, or Windows Forms based controls should be replaced with new controls from WindowsFormsLib.

Studio for Compact Framework is a compact version of AppMaker for.NET Compact Framework. It

supports both the Windows Mobile and Pocket PC WinCE Platforms, and also Mono. An important feature of Studio for Compact Framework is the possibility to generate code at runtime, based on a certain Model View Controller (MVC) architecture. This makes the transition from Pocket PC to Windows Mobile easier. Studio for Compact Framework is fully compatible with App Maker and can be used as a powerful tool for desktop prototyping. Studio for Compact Framework allows you to design user interfaces, connect to a database and build functionality. It offers the following features: Data validation: Visual representation of

data validation controls for mobile and desktop Windows Mobile and Windows XP/2003 applications Send data validation controls directly to the Windows Mobile runtime; Design form for mobile applications on your Windows desktop and quickly add validation controls to it and even generate the required code at runtime; Build data validation controls for desktop or mobile application; Use control and data validation from any device that supports the .NET Compact Framework 2.0. Validating data entry: Quickly validate a form by drag-and-dropping controls and validating data fields with visual representation; Visualize and

validate data for the Pocket PC or Windows Mobile app; Convert value from a database, values in text boxes, or values in password boxes and data fields to data validation controls; Allow data validation to be cancelled or disabled when user click outside the control. Views: Dynamic controls with settings for different tab layouts for the Windows Mobile and Windows XP/2003 desktop apps; Useful views for mobile and desktop apps; Open different views of data binding controls for different device types; Application model for modeling the user interface; Global model for integrating the application; Dynamic help. Version 3.7.4 and

earlier: Chart and dataviz controls:
Chart and chart view for compact
mobile and desktop apps
(requires.NET Compact Framework
version 2.0 or Mono); Chart view for
desktop and mobile apps
(requires.NET Framework 2.0);
Chart view for Windows Mobile apps
(requires.NET Framework version
